INDIVIDUAL
APPROACH

ASSISTED REPRODUCTION

Couples more and more often come to the conclusion that fulfilling their wish to have a child may be problematic. We offer a broad spectrum of interventions from simple to complex, performed in our embryological or genetic laboratory.

At our clinic, assisted reproduction is tailored to every couple's needs according to both the patient's health condition and personal requests.

In addition to classical reproductive medicine, we also offer genetic tests aimed at couples who are planning a family and want to have an overview of possible recessive diseases.

CARDIAC SURGERY

Cardiac surgery is a medical speciality focused on the diagnosis, treatment, and management of heart conditions. By utilizing advanced surgical techniques and a multidisciplinary approach, we provide effective solutions for patients with complex heart issues.

Our services range from minimally invasive procedures to complex open-heart surgeries, all aimed at restoring optimal heart function and improving patients' quality of life. By collaborating with leading cardiac specialists and state-of-the-art facilities, we ensure that every patient receives comprehensive, personalized care tailored to their unique needs.

DNA TESTING

Understand your Genes with DNA test and discover your predispositions, disease risks, metabolism and ideal diet comfortable from your home. You will receive the test results in the mobile app, which you can download from the App store or Google Play on your mobile phone.

Your DNA carries valuable information that reveals what diseases your body is susceptible to or what drugs it can't tolerate. In addition, DNA can tell you what sports you're suited to or what foods to eliminate from your diet. The DNA test is painless, it is taken from saliva and you can take it yourself in the comfort of your own home.

ORTHOPAEDICS

Orthopaedic surgery can relieve joint pain and help with limited motion that influence every aspect of your life.

The accredited orthopaedic department of the Horovice Hospital provides care for patients with degenerative diseases of the musculoskeletal system, especially large joints, including implants of total hip and knee joint endoprotheses, as well as treatment of chronic and traumatic soft joint diseases (arthroscopy, anterior cruciate ligament plastics). An integral part of care is the prevention of congenital dysplasia of the hip joint of newborns and its basic conservative treatment.

The Beroun One-Day Care Centre provides a full range of arthroscopic procedures ranging from diagnostic and preventive procedures for the early prevention of arthrosis to complex reconstructive procedures.

RADIOTHERAPY OF PROSTATE CANCER

Prostate cancer is the second most common cancer in men worldwide. More than 1.4 million cases are recorded each year and therefore our main goal is to provide patients who have already been diagnosed with this disease or are likely to develop it with early and high-quality radiotherapy treatment.

General radiotherapy is provided at the Oncology Centre, which is part of the hospital network in the Czech Republic. This centre, specializing in prostate treatment, is recognized as one of the leading oncological facilities in Central Europe.

Most effective way of medical treatment which does not require so much parallel care and brings the most relevant results is to focus on two groups of patients: The patients with low-risk and middle-risk diseases of the prostate.
